

Barking United Services Club delighted with finished installation

PURIFIED AIR, is one of Europe's leading air systems specialists and supplies a range of kitchen smoke, grease and odour neutralising equipment, which is unique to the company.

The company has recently installed a highly specified and engineered odour control system in Eldridge Pope's newly opened bar The Toad. The new outlet, is located in Milton Keynes' new pleasure dome Xscape which features amongst other things 48 retail outlets, a health club, themed restaurants and the largest, at 170m long and 60m wide, indoor ski-slope with real snow in Europe, the 'Snozone'. Eldridge Pope has invested more than £1.3 million in the new bar which enjoys a prime position within the leisure dome. The Toad, which is located over two stories trades from 9.30am, when it offers breakfasts to shoppers, until 2.00am and has been positioned by Eldridge Pope to be the in-place to meet particularly at night for the young.

Purified Air became involved right at the beginning of this contract initially in a consultancy capacity and specified a combination of their electrostatic precipitators with an O.N.100 odour neutraliser. Firstly the electrostatic precipitators are used to clean the air stream of grease and smoke and then the odour neutraliser removes the gaseous phase ie the smell, using a patented process. The company's range of odour and smoke neutralising equipment, when applied correctly, can reduce emissions from most restaurant and other commercial cooking applications by up to 90% ensuring that they meet the necessary environmental criteria.

Purified Air as one of Europe's leading experts in the field of environmental control work as consultants for many large and well-known restaurant and public house chains and their customer base extends to thousands of businesses ranging from small independent organisations to large Public Limited Companies.
