

## **Second successful contract for Sheffield Assay Office**

Following on from a successful contract to supply and install 19 fixed air conditioning units at Sheffield Assay Office **PURIFIED AIR**, one of Europe's leading environmental control specialists, has recently completed a second project for the Assay Office.

An Assay Office has the responsibility in the UK for hallmarking gold, silver and platinum. There are Assay Offices in Edinburgh, Birmingham, London and Sheffield. Purified Air was originally appointed to supply air conditioning units to the offices, marking halls and new canteen at Sheffield Assay Office to overcome the uncomfortable heat build up during warmer weather. After an initial site survey the company specified the correct number of air conditioners to create a cool and pleasant working environment irrespective of outside temperatures.

The initial scheme specified for Sheffield Assay Office was a split system. This is where the units are installed inside the room with external units mounted on the roof or on an outside wall. The split system is the most popular air conditioning system for commercial premises and Purified Air offers a variety of configurations including ceiling mounted cassettes; high wall mounted, low wall mounted and under ceiling units. The company also has preferred supplier and installer status with all the leading brand names

For the second contract Purified Air specified an air conditioning ceiling cassette unit for the refurbished reception of Sheffield Assay Office, which features wood panels incorporating the hallmark designs for a number of different years.
